This 5-day maintenance course will help technicians understand the aircraft systems, servicing, and practical know-how needed to maintain the aircraft properly. This course is for the technician that has similar aircraft experience as well as the manager or scheduler who wants a better understanding of the aircraft. If the aircraft is available, actual hands-on practices will be conducted to ensure a complete understanding of aircraft systems and 'real-world' maintenance practices.

The Gulfstream GV class offers an excellent way to expand technician productivity.
